

MIDSOLE ARMOR™

COMBINATION PUNCTURE PLATE/LADDER SHANK/MIDSOLE

COSMAS®

Glass fiber reinforced composite provides structure, support, and puncture resistance from the arch to the heel.

L-Protection® high-performance textile composite is flexible, puncture resistant, and naturally insulating from heat and cold.

Advanced textile composites such as those manufactured by Lenzi S.p.A. are fast becoming the industry standard for puncture resistant devices in protective footwear. Several of the footwear brands present in the US fire services market are using such materials because they provide enhanced flexibility, do not readily transfer of heat or cold, and, hence, offer the potential for a more comfortable boot.

Cosmas® has taken this concept one step further with its patent pending MIDSOLEARMOR™ solution, which combines a flexible advanced textile composite in the forefoot area with a stiff, supportive glass fiber reinforced composite from the arch back to the heel. This exclusive combination puncture resistant device/ladder shank/midsole provides full-coverage puncture resistance and thermal insulation for the bottom of the foot.

MIDSOLEARMOR™ is stiff and supportive in the heel and arch for stable footing on the ground or on the ladder, yet flexible in the forefoot, allowing your foot to flex naturally. The result is that with Cosmas® boots, you get maximum comfort and maximum performance.
